Author’s Preface

Writing a dissertation is not possible without the support and friendship of many people. I wish to express my heartfelt gratitude to the following people, without whom the writing of this dissertation would not have been possible.

First of all I would like to thank my supervisor, Professor Stephan Klasen, for accepting me as a doctoral student and giving me the opportunity to write this thesis. He gave me a great deal of freedom to organize my work as I wished and, at the same time, he was extremely supportive whenever I had a question (and has given great input and ideas to whatever I have asked him). I would also like to thank my second advisor, Professor Stefan Sperlich. He was also very supportive and took the time to discuss methodological issues whenever I had a question. I would also like to thank both for giving me academic guidance beyond this thesis.

My colleagues made the work in Göttingen and at the World Bank very enjoyable. They enriched my life in many different ways, some as co-authors, others through comments on my essays, collaboration, or moral support, or simply via interesting conversations during lunch breaks, coffee breaks, or with a drink in the evening. There are too many to name them all but in particular I would like to thank Michaela Beckmann, Souleymane Coulibaly, Uwe Deichmann, Indermit Gill, Johannes Gräb, Melanie Grosse, Carola Grünn, Isabel Günther, Kenneth Harttgen, Dierk Herzer, Hajo Holzmann, Andreas Kopp, Steffen Kröhnert, Inmaculada Martínez-Zarzoso, Mark Misselhorn, Felicitas Nowak-Lehmann, Jan Priebe, Ramona Rischke, Katharina Scholz, Julian Weisbrod, and Maria Ziegler.

I gratefully acknowledge a Georg-Christoph Lichtenberg scholarship from the Center of Statistics at the University of Göttingen. This scholarship gave me the economic freedom to focus on my statistical education and on research. I also acknowledge conference travel grants from the University of Göttingen, the Deutsche Forschungsgemeinschaft, the Spanish Ministry of Education and Science, the Universitätsbund Göttingen e.V., and the Deutsche Bundesbank.

My sincere thanks go to Clive Bell, Matthias Busse, David Canning, Mark Dincecco, Steven Durlauf, Michael Grimm, Carola Grünn, Dierk Herzer, Birgit Hofmann, Rainer Klump, Tatyana Krivobokova, Branko Milanovic, Sanjay Reddy, Xavier Sala-i-Martin, Martin Schlather, Evita Schmieg, Michael Ward, Walter Zucchini, and anonymous referees for helpful comments or discussions on one or more of my five essays. All of them provided extremely valuable assistance for improving this dissertation.

In addition, comments from participants of seminars in Göttingen, Hannover, Bologna, Erfurt, Lüneburg, and the following conferences helped to improve this dissertation: Research in In-

Finally, my biggest thanks go to my family and my friends. They always trusted in me and without their persistent support and encouragement I would not have been able to finish this dissertation.

List of Tables

1.1 Simulated level of $R_n$ on the boundary for normal mixtures ................. 14
1.2 Power under first alternative, $f_1 = f(x, 0.5, -1.5, 1.5, 1, 1)$ ............... 15
1.3 Power under second alternative, $f_2 = f(x, 0.3, -1.5, 1, 0.75, 0.75)$ ............ 15
1.4 Tests for unimodality for the distribution of log GDP per capita in European regions 18

2.1 Component tests and goodness of fit, 1970-2003 ........................................ 31

3.1 Global and regional population and number of poor people ...................... 44
3.2 Global and regional inequality measures and inequality decomposition ........ 45

4.1 Top four exports of the six ACP regions ................................................. 56
4.2 Import demand elasticities by country ..................................................... 63
4.3 Potential welfare effects of a full liberalization ....................................... 65
4.4 Long-run welfare effects of a tariff reduction according to the interim agreements 66

5.1 Panel analysis for all countries (dependent variable: life expectancy) ........... 82
5.2 Panel analysis for non-OECD countries (dependent variable: life expectancy) ... 83
5.3 Panel analysis for non-OECD countries (dependent variable: literacy rate) ....... 84
A.1 Model selection criteria for mixture models fitted to the cross-sectional log-income distribution of European regions ........................................... 89
B.1 Model selection criteria for mixtures models fitted to log cross-country income distribution, 1976 ................................................................. 91
B.2 Results of Silverman's test, 2003 ............................................................... 94
B.3 Fit of the three-component model ............................................................ 95
B.4 Posterior means, 1976 and 2003 ............................................................... 96
C.1 Regions and associated countries ............................................................. 101
C.2 Global and regional $1 and $2 per day poverty rates and poverty gap measures .. 105
D.1 Import demand elasticity for each 1 digit HS category, EU 25 ....................... 118
D.2 Import demand elasticity for each 1 digit HS category, Sub-Saharan Africa ....... 119
D.3 Short-run welfare effects of a tariff reduction according to the interim agreements 120
E.1 Countries classified by political system, GDP per capita and life expectancy, 1970 122
E.2 Countries classified by political system, GDP per capita and life expectancy, 1980 123
E.3 Countries classified by political system, GDP per capita and life expectancy, 1990 124
