List of Tables

1.1 Rate of Pro-Poor Growth for Three selected Periods .......................... 29
1.2 Cumulative Income Pro-Poor Growth from 1996 to 2005 ........................ 30
1.3 Rate of Pro-Poor Growth by Regions from 1996 to 2005 ........................ 30
1.4 Colombia: Poverty Measures by Area from 1996 to 2005 ........................ 31
1.5 Mean of Income by Deciles from 1996 to 2005 ................................. 32
1.6 Atkinson Inequality Measures from 1996 to 2005 ................................. 32

2.1 Composition of Variables of Non-Income Indices ................................. 71
2.2 Non-Income Deciles, 1997 and 2003 ............................................. 74
2.3 Income and Expenditures Deciles, 1997 and 2003 ................................. 77
2.4 Poverty and Inequality Measures by Area 1997–2003 ............................ 78
2.5 Mean Growth Rates, Mean Absolute Changes, Pro-Poor Growth Rates, and Pro-Poor Changes .......................................................... 79

3.3 Beta Convergence Using Cross-sections and Non Linear Least Squares. Dependent Variable: Average Growth Rate of pc IDBH 1975-2000. ............. 117
3.4 NLLS Regressions. Dependent Variable Average Growth Rate of pc PDB. 1975-2000. ................................................................. 118
3.5 NLLS Regressions. Dependent Variable Average Growth Rate of pc IDBH. 1975-2000. ................................................................. 119
3.6 OLS Linear Regression. TSCS Data. Dependent Variable $\log(y_{i,t})$. Relative Per capita PDB. 1975-2000. ................................................................. 120
3.7 OLS Linear Regression. TSCS Data. Dependent Variable $\log(y_{i,t})$. Relative Per Capita IDBH. 1975-2000. ................................................................. 120
3.8 Linear Mixed Model (REML). TSCS Data. Dependent Variable: $\log(y_{i,t})$. Relative Per Capita PDB. 1975-2000. ........................................ 121
3.9 Linear mixed model (REML). TSCS Data. Dependent Variable: $\log(y_{i,t})$. Relative Per Capita IDBH. 1975-2000. ........................................ 121
3.12 Autoregressive Processes of Order 1. Dependent Variable: $\log(y_{i,t})$. Per Capita PDB. 1975-2000. ........................................ 124
3.13 Autoregressive Processes of Order 1. Dependent Variable: $\log(y_{i,t})$. Per capita IDBH. 1975-2000. ........................................ 125
3.14 Mixture Model with 3 Components. Fitted with ML. Dependent Variable: $\log(y_{i,t})$. Relative Per capita PDB. 1975-2000. ........................................ 126
3.15 Mixture Model with 3 Components. Fitted with ML. Dependent Variable: $\log(y_{i,t})$. Relative Per Capita IDBH. 1975-2000. ........................................ 127
3.16 Share of Total PDB and Share of selected PDB Sectors by Department. Years 1975 and 2000. ........................................ 128

4.1 Descriptive Statistics of the Variables Used ........................................ 160
4.2 Evolution of Point Estimates and 95% Confidence Intervals of the Coefficients of Variation (CV) ........................................ 161
4.3 Beta Convergence (OLS) using all available Observations. Dependent Variable: Change in Literacy Rate (LIT) between 1973 and 2005 ........................................ 162
4.4 Beta convergence (OLS) excluding Outliers. Dependent Variable: Change in Literacy Rate (LIT) between 1973 and 2005 ........................................ 162
4.5 Beta Convergence (OLS) using all available Observations. Dependent Variable: Change in Infant Survival Rate (ISR) between 1975 and 2000 ........................................ 163
4.6 Beta Convergence (OLS) excluding Outliers. Dependent Variable: Change in Infant Survival Rate (ISR) between 1975 and 2000 ........................................ 163
4.7 Beta Convergence (OLS) using all available Observations. Dependent Variable: Change in Life Expectancy at Birth (LEX) between 1975 and 2000 ........................................ 164
4.8 Beta Convergence (OLS) excluding Outliers. Dependent Variable: Change in Life Expectancy at Birth (LEX) between 1975 and 2000 ........................................ 164
4.9 Beta Convergence (OLS) using all available Observations. Dependent Variable: Change in Well-nourished Rate (WR) between 1995 and 2005 ........................................ 165
4.10 Beta Convergence (OLS) excluding Outliers. Dependent Variable: Change in Well-nourished Rate (WR) between 1995 and 2005 ........................................ 165
4.11 Poverty Headcount Index (% of Households below the Poverty Line) by Department. 1996 to 2005 ................................................................. 166
