List of Tables

1.1: Relevant macroeconomic indicators for selected periods (averages) ......................... 29
1.2: Changes in the educational structure of the Honduran labour force ...................... 36
1.3: Structures of education for the net migrants and by areas ..................................... 38
1.4: Percentage contribution of the proximate determinants to inequality changes of the household per-capita income ................................................................. 41
1.5: Basic Data on Conditional Cash Transfer programme (PRAF) .............................. 45
1.6: Income categories, 2005 and 2007 (in Lempiras of 1999) ...................................... 46
1.7: Gini coefficient changes - monthly labour earning distribution ............................. 47
1.8: Decompositions of the change in the Gini coefficient, labour earnings .................. 52
1.9: The macroeconomic earnings-gap effect on labour income inequality changes ..... 59
2.1: The macroeconomic earnings-gap effect on labour income inequality changes due to a one unit log earnings-gap shift ................................................................. 74
2.2: The macroeconomic earnings-gap effect using simulated data ............................. 77
2.3: The macroeconomic earnings-gap effect using observed and simulated data .......... 77
3.1: Descriptive statistics for workers in 2006 .............................................................. 87
3.2: Reduced form of the index function, probit ML (first step) ................................. 98
3.3: Wage equations adjusted for self-selection (second step) ..................................... 100
3.4: Migration incidence by groups ............................................................................. 102
3.5: Structural form of the index function, probit ML, 2002-2006 (third step) ............. 105
4.1: Enrolment rates and school expectancy in 2000 .................................................... 114
4.2: Total expenditure on education as percentage of GDP in 1999 ............................. 118
4.3: Ratio of teacher salaries to GDP per-capita in 2001 ............................................ 119
4.4: Annual expenditure per student by level of education and as a percentage of GDP per-capita in 1999 ................................................................. 121
4.5: Inequality indicators and regression coefficients for mathematic scores ................ 132
4.6: Inequality indicators and regression coefficients for communication scores .......... 133
A.1: Selected characteristics of the Honduran labour force ......................................... 136
A.2: Gini coefficient for household per-capita income and monthly earnings ............. 137
A.3: Pro-poor growth rates ......................................................................................... 137
A.4: Macroeconomic variables ........................................................................................................ 138
A.5: Percentage contribution of the proximate determinants to inequality changes
of the household per-capital income in rural areas ...................................................................... 139
A.6: Percentage contribution of the proximate determinants to inequality changes
of the household per-capital income in urban areas .................................................................... 140
B.1: Distributional moments of the log monthly earnings, 1999 and 2005 ............................... 143
B.2: Observed and Simulated Gini coefficient using observed distributional moments ....... 144
C.1: Reduced form of the index function, probit ML (first step – alternative threshold) ...... 145
C.2: Wage equations adjusted for self-selection (second step – alternative threshold) ......... 146
C.3: Structural form of the index function, probit ML (third step – alternative threshold) ... 147
C.4: Structural form of the index function, probit ML (third step – with unemployment) ... 148
D.1: Descriptive quantiles, Mathematics scores ........................................................................... 149
D.2: Descriptive quantiles, Communication score ......................................................................... 150
D.3: Descriptive schooling statistics ............................................................................................... 151
D.4: Baseline OLS regressions. Mathematics and communication test scores ...................... 152
D.5: Complete OLS regressions. Mathematics and communication test scores ...................... 153
D.6: Quantile Regression, dependent variable: Mathematics scores .......................................... 154
D.7: Quantile Regression, dependent variable: Communication scores .................................... 155
